

## **Restarting treatment - information for patients**

The HFEA have taken the decision that fertility clinics can apply to reopen from 11 May 2020.

The safety of patients and clinic staff remains a priority for us and the HFEA. Before we can resume treatment, we must demonstrate that we can provide a safe service for patients and a safe working environment for our staff that complies with recommendations from professional guidance. To do this we must have a COVID-19 treatment commencement strategy in place.

If you have specific questions regarding your medical treatment or the reopening of the clinic, please contact us.

Further information, including some questions and answers for patients can be found on the HFEA website at <https://www.hfea.gov.uk/treatments/covid-19-and-fertility-treatment/coronavirus-covid-19-guidance-for-patients/>
