Protecting our next generation from an uncertain fertility future: why education is key

Mirror | Monday 04 April

Artificial sperm grown from skin cells could offer hope for infertile men

Fresh insights into early human embryo development

Science Daily | Thursday 07 April

A detailed molecular analysis of the embryo's first week of development has been conducted by scientists. Their results show that there are considerable differences in embryonic development between humans and mice, which is the most common organism of study in this field.

Grandmother Sharon Cutts, 55, becomes Britain's oldest mother of triplets:

The Guardian | Wednesday 06 April

The nurse from Lincolnshire and her partner Stuart who's 40 borrowed £15,000 to pay for IVF treatments after being refused help on the NHS. Sharon also revealed she gave herself Botox injections and fresh hair extensions in hospital before going into labour to look good after giving birth.

Researchers hope to speed up sperm:

IOL | Wednesday 06 April

A liquid made from a patient's blood and injected into a sample of their semen could treat male infertility. Researchers in Spain are testing the idea that 'spinning' blood to extract platelet-rich plasma (PRP) could make sperm swim faster and increase pregnancy rates in couples seeking fertility treatment.

Why women are worrying about their fertility far too early

NET Doctor | Wednesday 06 April

Should baby panic mode set in during your 20s? According to consultant gynaecologist Professor Geeta Nargund, the answer yes. She recently warned that women should start trying for a baby before they hit 30, or risk never having kids.

Protecting our next generation from an uncertain fertility future: why education is key:

BioNews | Monday 04 April

(Written by Dr Geeta Nargund) The right to fertility education is a topic I have been discussing for some time, and which has seen intense discussion from both sides of the fence. However in looking to focus on scientific fact, not only is fertility greatly affected by the lifestyle choices we make, but for women the harsh biological reality is that fertility declines much faster than that of men.

Artificial sperm grown from skin cells could offer hope for infertile men:

Mirror | Monday 04 April

Scientists are developing the technique using mouse stem cells, offering hope to many of the 3.5 million Brits struggling with fertility problems.
